Tech with Purpose:

Building a Future that Matters.

[redacted]

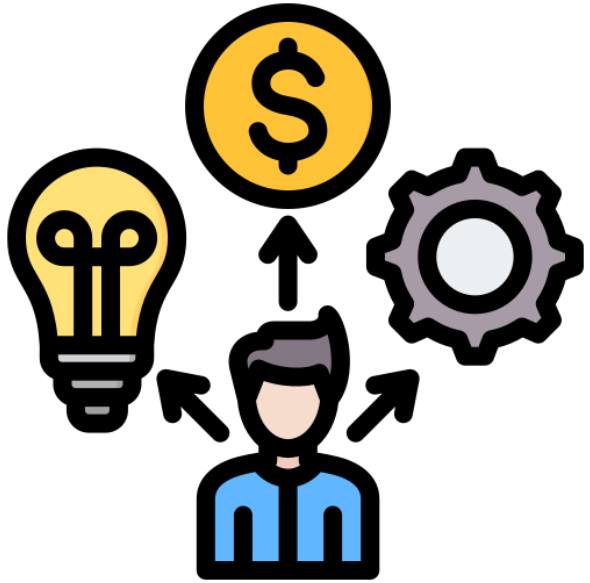
Hacksatech.com

A **‘Future Minds Summit’** is an event designed to bring together educators, students, innovators, and thought leaders to explore and discuss advancements in education, technology, and personal development. These summits typically feature keynote speeches, panel discussion, workshops and networking opportunities aimed at fostering collaboration and sharing insights on shaping the future.

ALEXANDER PETER
PM - HACKSAT TECH COMPANY

Hi! everyone,

My name is **Alexander Peter**, Product Manager Hacksat Tech Company, and Today, I'm not just speaking to students or developers or designers – I'm speaking to the future builders of Africa and the world. The theme of this summit is building the future that matters, and that future starts with you.



We live in a world where we can build robots that perform surgeries, but millions still die from preventable diseases. We can train AI to write books, but some children still don't have textbooks. What if we used technology not just to make life easier – but to make like better?

TECH AS A TOOL FOR IMPACT

Technology is powerful – but power without purpose is dangerous. The real value of tech lies not in how complex it is , but in **how useful it is**

Example:

In Nigeria, Hacksat is helping students access International quality entrepreneurship education for free.

PURPOSE OVER POPULARITY

We live in the age of influencers, clout, and trending hashtags. But here's the truth:

Impact is greater than likes.

Innovation isn't about creating what's cool – it's about creating what's **needed.**

Don't just build the next TikTok. Be an entrepreneur who starts a business to solve a real problem in your community.

Don't chase popularity. **CHASE PURPOSE**

DESIGNING FOR HUMANITY

Every time you create something – an app, a website, a solution – ask yourself

- **Who does this help?**
- **How will this improve someone's life?**
- **Is this solving a real problem?**

Good tech doesn't just work. It serves.

Tech with purpose thinks about people first – the underserved, the voiceless, the one often left behind.

ACTION

So what can you do, starting today?

- **Learn a skill – coding, design, storytelling.**
- **Join or create a team that solves problems. (Hacksat)**
- **Start small – even an idea on paper can change the world if you pursue it.**

Don’t wait for permission to build. Don’t wait until you have millions.

Start now. With what you have. For the people around you.

Key Take Away

“The most powerful kind of innovation is the one that serves people. So, as we imagine the future – let’s make sure it’s one worth living in. Not just smarter. Not just faster. But fairer, kinder, and more connected than ever before.”

- Alexander Peter

What did you learn today?

1. It's good to ask questions and learn about Tech with Purpose!

2. Plan your journey in to industries!

3. Your career is just as important as your future.

Where to go from here

1. Join our whatsapp group to connect with other community members.

2. Sign up for your membership ID for Hacksat Community

3. Learn more about Tech by following us on facebook and instagram.

We hope you learn something awesome today!
